WHY INVEST IN THE OUTDOOR ROOM

Improving your backyard is an affordable and achievable way to drastically improve your lifestyle at home. You and your family will spend more time outdoors enjoying the fresh air and creating memories.

Improving your outdoor spaces not only improves your lifestyle – it also improves the value of your home, and at a much better return than money spent on internal improvements. How often do you hear real estate agents talk about “kurb appeal” when assessing property values? This value actually grows when spent outdoors. As your garden grows, the appeal and value grows with it, while a kitchen or bathroom renovation will only depreciate once complete.

As outdoor projects are far more DIY friendly than internal renovations, you have the opportunity to take on the job yourself, in your own time, putting your own signature style into it. This guide is designed to ignite your creativity and shape your vision for the project that’s right for you, while adding to the value of your home.

PROJECT PLANNING FOR SUCCESS

EASY AS 1, 2, 3

- 1 What are your needs / what are you looking to achieve?
- 2 What's your style?
- 3 DIY or Contractor?

STEP ONE

WHAT DO YOU NEED?

PAVING

There are many reasons you may want or need to install new paving. Paving is great for creating a new patio entertaining area or adding a path down the wet muddy side of your house.

RETAINING WALLS

A finished retaining wall can provide a practical solution to your soil erosion or sloped land problems or deliver a neat addition to your home as a planted out garden bed.

GARDEN BEDS

There are many reasons you may want or need to install a new garden bed like; adding depth to your flat backyard, creating a defined boundary between your turf and garden bed, building a veggie patch or creating/installing a raised garden bed.

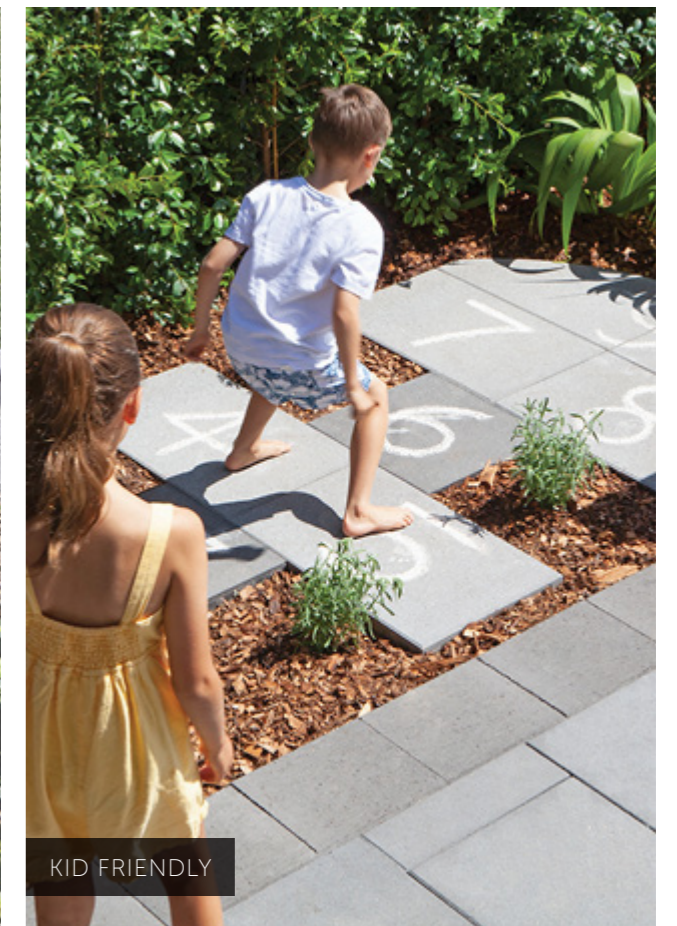

STEP TWO

WHAT'S YOUR STYLE?

When we think of our personal style, we normally think about our clothes and our home décor as good expressions of our personality. Your outdoor space is another opportunity to showcase your personal style.

Your yard and landscaping are an important part of the overall look and functionality of your home; we've included 5 outdoor themes to help you make your outdoor space a place that reflects your style.

HAMPTONS

The Hamptons is a famous group of towns and villages along the eastern end of Long Island that's best known as the luxury sea-side summer playground of the rich and famous.

The area is renowned for its coastal-chic styling brought to life with a colour palette of whites with ocean blues, neutrals and stripes which has inspired renovation projects across the globe.

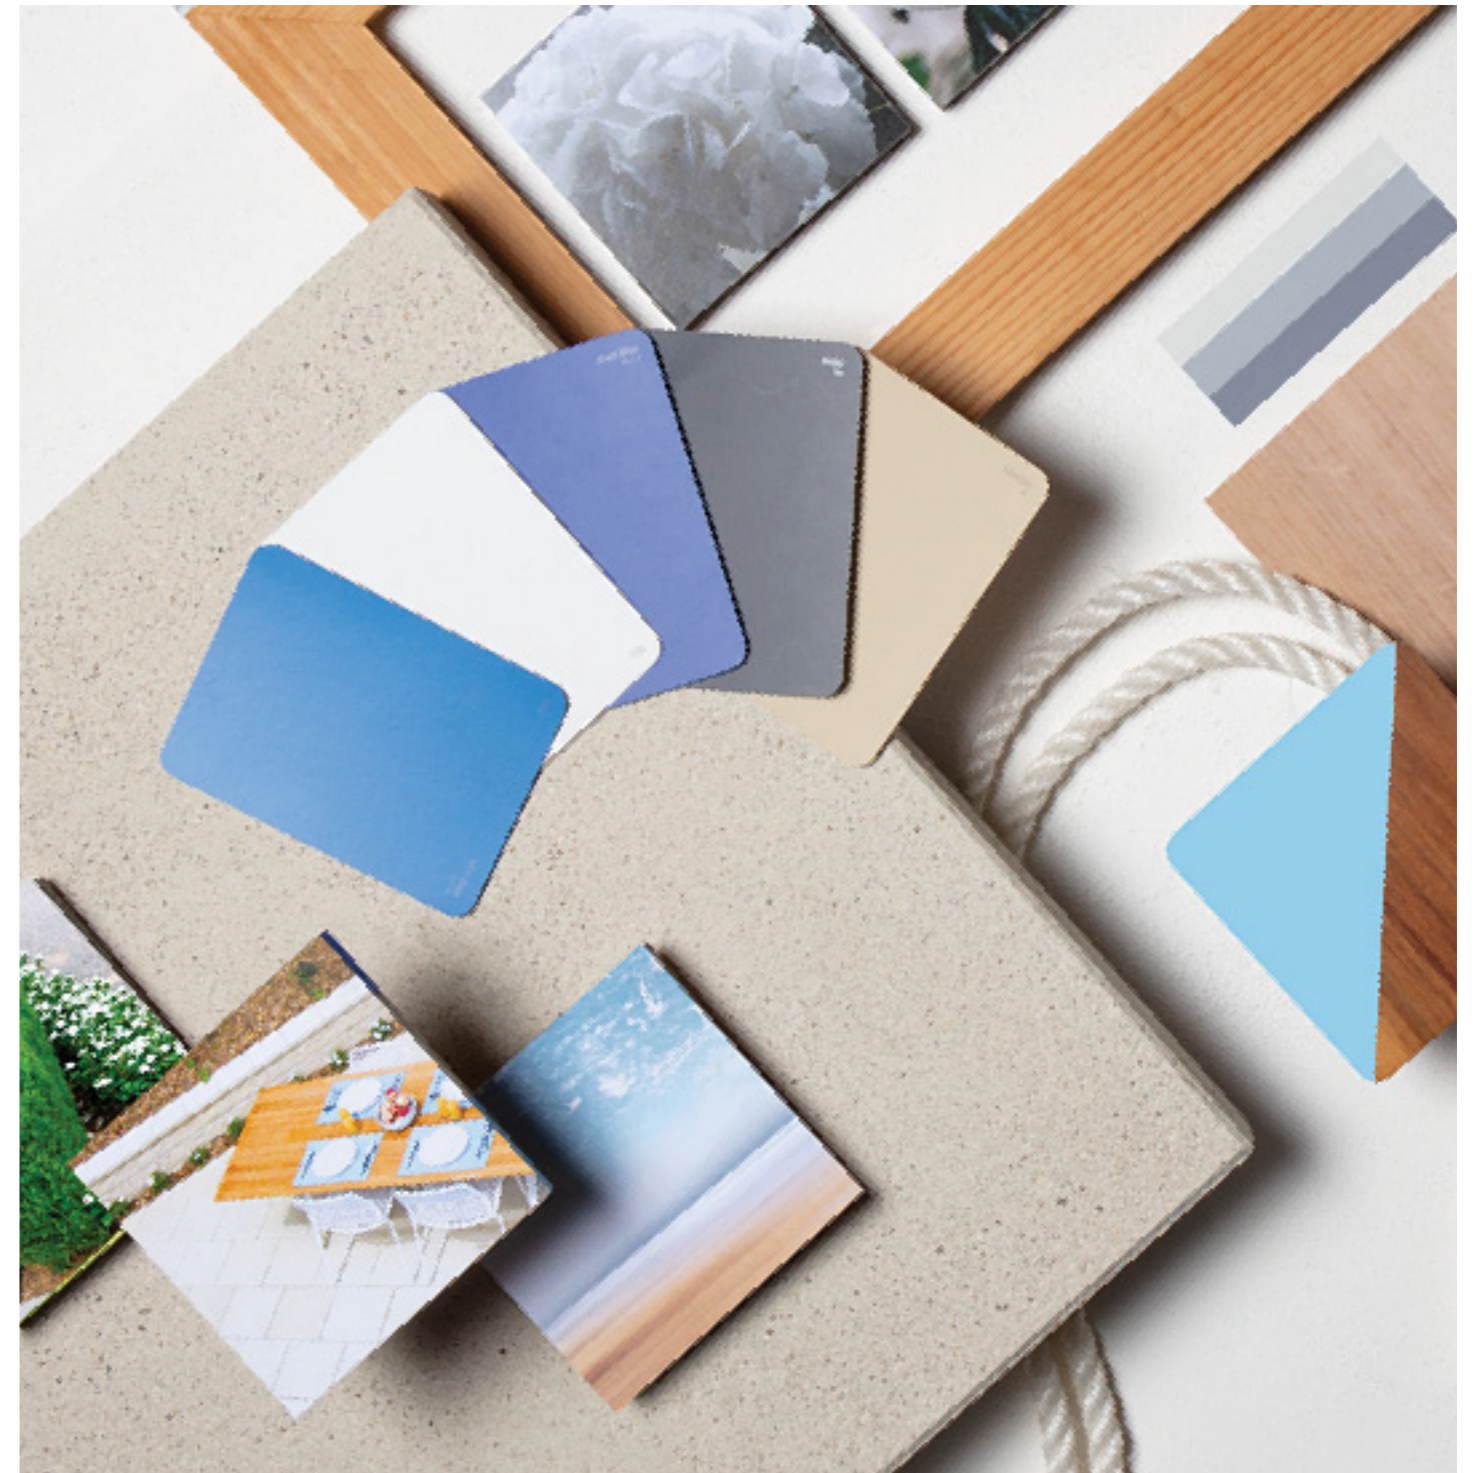

Australian's have had a love affair with the Hamptons style for over a decade and this trend has only increased through the 2020 renovation boom. It is now beyond doubt that Hamptons style is one of the most desired design themes for Aussie homes and in 2021, the Hamptons trend is pushing from the indoors to our much beloved outdoor areas.

"The incredibly popular Hamptons styling trend is not limited to indoor decorating and now, the Hamptons backyard, garden and entertaining areas have arrived" says award winning landscape designer Jason Hodges.

Key design themes for Hamptons gardens include; lush green lawns, privacy hedging, paved patio areas with styled outdoor settings which are the perfect place to admire the beautifully landscaped garden.

“Coastal-chic styling brought to life with a colour palette of whites with ocean blues, neutrals and stripes.”

“ The essence of Bali starts with a villa experience, a personal sanctuary away from your typically busy life.”

DESIGN AND STYLE IDEAS

BALINESE

Bali is a holiday favourite for Australian's with the 'Island of the Gods' attracting a record number of Aussie's in 2019 before the coronavirus pandemic halted travel.

The good news is, for less than the cost of a trip to Indonesia, you can bring the best of Bali to your backyard in a transformation that will add value to your home and lifestyle.

Homeowners can create a dream Bali inspired oasis by following some simple design inspirations, colour schemes and clever planting that will leave your backyard looking like a lush Bali villa for your family to enjoy all year round.

"Colour and texture are key elements to any Bali garden. Think textured charcoal stepping stone pavers, a collection of greens through the planting scheme, bamboo screens and smooth pebbles to complete the look" says award winning landscape designer Jason Hodges.

PALM SPRINGS

Palm Springs boasts one of the world's most recognisable residential 'looks' and right now, it's one of the biggest style inspirations for Australian homeowners. Made famous by mid century modern designs featuring overhanging flat roofs, the iconic dry climate landscaping and accentuated furnishings, the Palm Springs style is (literally) so hot right now!

In Australia, the Palm Springs look starts with a contemporary coastal chic design infused with a touch of glamour that presents in a soft pastel colour palette and feature décor pieces which provide the resort style feel.

"Palm Springs is a design theme that perfectly suits the style of our homes with a focus on the outdoor areas and making the most of the climate. While there are some basic Palm Springs principles to follow, this is a trend that allows for a modern Aussie twist with a coastal influence in the hardscape materials and the inclusion of Australian natives in planting" says award winning landscape designer Jason Hodges.

The Palm Springs garden is a look that can be easily applied to both front and backyards and is a style that is perfect in smaller homes but can equally be used to create stunning spaces in larger yards.

While Palm Springs gardens look great, one of the reasons that they are so incredibly popular right now is that they are low maintenance.

The plant selection requires little upkeep, turf is kept to a minimum and the alfresco area is a concrete paver made to last so you can spend time enjoying, rather than maintaining your Palm Springs paradise.

“ A design theme that perfectly suits the style of our homes with a focus on the outdoor areas and making the most of the climate.”

“ A Zen garden starts with discipline in planning the space, a relaxation and appreciation garden.”

DESIGN AND STYLE IDEAS

JAPANESE

For many, Japan is a holiday destination full of fascinating contrasts. It is a country where the natural beauty of Mt Fuji, onsen baths, distinctive gardens, traditional art and ceremony meet the bustling streets, bright lights and high tech lifestyle head on.

A trip to Japan provides a cultural immersion different to any on offer throughout South East Asia and over the last 10 years, low cost airlines have transported record numbers of Australian's to the land of the rising sun. While visitors come for the sights, they come back for the culture and the feeling of being in Japan (and probably the food)!

The good news is, Aussie homeowners can now bring the best of Japan into their backyards with a low cost Zen style garden.

“Now more than ever, people want their backyards to be safe, private sanctuary's for relaxation and with this comes the trend of people transforming their yards from zero to Japanese zen” says award winning landscape designer Jason Hodges.

Zen gardens are low maintenance, relaxing and enjoyable to be in.

RURAL

Australia is blessed with a year-round climate and an incredible natural environment. With such beauty on our doorstep, it's no surprise that we are passionate about the great outdoors.

For many, our fondest memories are in the outdoors; from camping trips and adventures at beaches, parks and even our backyards which have long been a favourite place to spend time with family and friends. It's for this reason that we strive to create beautiful backyards to enjoy the outdoors at home.

While land sizes are getting smaller, the one commonality in places of any size is the desire to have a great outdoor area. In larger properties, an Aussie inspired rural backyard is a great design choice because they're as practical as they are visually pleasing.

"The key to designing a good rural inspired garden is to treasure your space and have discipline around how you fill it. I recommend taking full advantage of the space by creating an alfresco dining area, there's nothing that brings the family together like enjoying a meal away from the distractions of technology. Instead, build a fire pit which I like to call nature's TV, it really is the must-have item in any rural garden" says award winning landscape designer Jason Hodges.

“A good rural inspired garden is to treasure your space and have discipline around how you fill it.”

STEP THREE

DIY OR CONTRACTOR?

A key consideration is who will be doing the installation. Adbri Masonry have a large range of DIY friendly products. We've also developed a series of video tutorials and step by step guides to assist you in every step of the project.

Doing a DIY project is very rewarding but requires thought, careful planning, the proper tools, the right material as well as some lifting and patience!

On the other hand, a professionally landscaped project may cost you more but will deliver a more professional quality finish to your project.

PLANNING GUIDE TO PAVING

“ Paving may only take up 20% of your yard, but it draws most of your attention.

Invest in a premium paver option now for an outdoor area you’ll never want to upgrade.”

HOW TO CHOOSE THE BEST PRODUCT?

Whether you’re hiring a tradie or doing this as a DIY project, you will need to ensure you pick the right product for your project.

While Adbri Masonry products are suitable for a variety of applications, the truth is that some will perform better in certain applications. Here are a few things to consider to pick the right paver for your project:

APPLICATION OR PROJECT TYPE

Arguably the most important thing you will need to consider is the type of traffic your pavers will be exposed to, either pedestrian or vehicular.

If the project is for vehicular traffic (a driveway for example), the paver will need to be a minimum of 50mm thick and small format, unless you intend to install the pavers on an engineer designed concrete base.

You should also consider the location of the pavers and the expected frequency of use. If your pavers are going to be used regularly in a highly visible area of your home like a new entertaining area, it’s important to consider a quality solution that will compliment your home. If they are to be used around a pool, it’s vital to choose a Euro® range paver as they are the only Adbri pavers suitable for use in saline environments.

SIZE AND SHAPE OF THE AREA

The size and shape of the area to be paved is an important consideration for a number of reasons. Firstly, some pavers are well suited to certain spaces as they are easy to work with. As an example, large format pavers can make smaller spaces appear bigger – a great design hack!

The shape of the area is also a vital consideration as it may mean that you need some cut pavers – this involves the use of a brick saw which requires caution when operating. Paver size choice can reduce the number of cuts you may need (if any) so it is well worth considering. If you aren't comfortable using a brick saw, look at pavers and designs that can reduce the number of cuts you require.

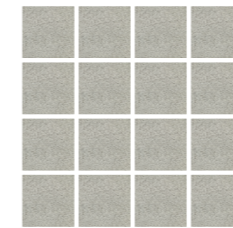

PAVING PATTERNS

There are a number of different paving patterns you can choose from and this can assist you in choosing pavers as some are more suited for rectangular pavers and others square.

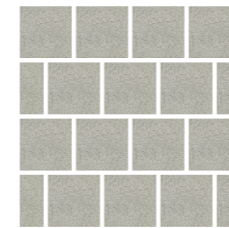

Some important things to consider are:

- Some patterns will require cuts
- 'Stretcherbond' and 'Stackbond' are considered the most DIY friendly as it requires minimal cutting and leaves little wastage
- On a flexible base (compacted road base and sand), pavers must always be laid with a 3mm gap to avoid the edges chipping.

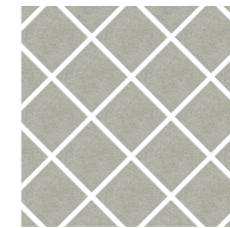

SQUARE PAVERS

Basketweave

DETERMINE PAVER QUANTITIES

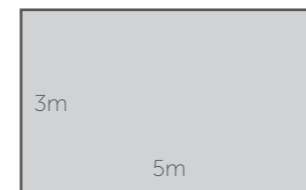

In order to receive an accurate quote or to finalise your order, you will need to determine how many pavers you will need. You can do this the easy way and use our product calculator. Alternatively, you can do some calculations yourself to determine the total area to be paved (in square metres).

The first step is to measure the space you would like to pave and multiply the length and the width - this will give you a total square metre figure which is suitable for receiving a quote.

Along with the Concrete Masonry Association of Australia, we recommend that you order an extra 5% of product to account for cuts and breakages.

FOR RECTANGULAR AREAS

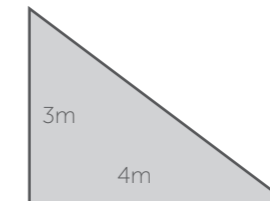

base(m) x height(m) = area(m²)

eg. 3m x 5m = 15m²

FOR TRIANGULAR AREAS

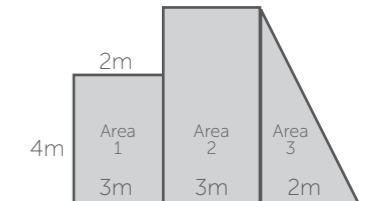

1/2 base(m) x height(m) = area(m²)

eg. 1/2 x 3m x 4m = 6m²

FOR ODD SHAPED AREAS

Break into sections

Area 1: 4m x 3m = 12m²
 Area 2: 6m x 3m = 18m²
 Area 3: 1/2m x 6m x 2m = 6m²
 Total area to be paved = 36m²

COLOUR AND TEXTURE

Another important consideration is the colour and texture you require for your paving. If your paving project is an entertaining area, courtyard or a patio, the colour and texture are important as they will set the scene for the entire area.

Consider which paving colour will best compliment your existing space by matching roof tiles, guttering or bricks/render.

PLANNING GUIDE TO RETAINING WALLS

“ Retaining walls don’t just have to be functional.

Choose the right block style to make your retaining walls one of the best features of your yard/garden.”

HOW TO CHOOSE THE BEST PRODUCT?

Whether you’re hiring a tradie or undertaking this as a DIY project, you will need to ensure you pick the right product for your project.

Whilst Adbri Masonry products are suitable for a variety of projects, the truth is that some products are better suited than others for different applications. Here are a few things to consider to pick the right product.

APPLICATION OR PROJECT TYPE

What is the purpose of your wall? Are you retaining land or building a raised garden bed? Is the wall in a prominent area where people will see, making the finished look important? All of these questions will help determine what wall is best for you.

Adbri Masonry have a selection of products that range from budget and basic blocks all the way through to architectural, aesthetic walls.

DETERMINE HOW MANY BLOCKS YOU WILL NEED

In order to receive an accurate quote or to finalise an order of your products, you will need to determine the quantity of blocks you need. We've taken the guess work out of it and created an easy to use product calculator! To start, you will need to know the length and height of your wall (the number of courses you will build).

Along with the Concrete Masonry Association of Australia, we recommend that you order an extra 5% to account for cuts and breakages.

Also, don't forget your wall caps if necessary and corner blocks if required!

COLOUR AND TEXTURE

If your wall will be in a prominent position in your yard or you are building a wall that is designed to enhance your homes visual appeal, colour and texture are very important. Look for colours that will compliment your existing environment by considering roof tiles and guttering as well as brick or render colours.

A textured face product would suit a traditional style home, whereas modern homes may choose to go for a product with a contemporary stone look or smooth finish, it's all down to personal taste and the style and vibe you want to create.

FOOTING CONSIDERATIONS

For most retaining wall projects, there are 3 options for the footings; compacted road base, a concrete foundation or the Torpedo™ Base Block.

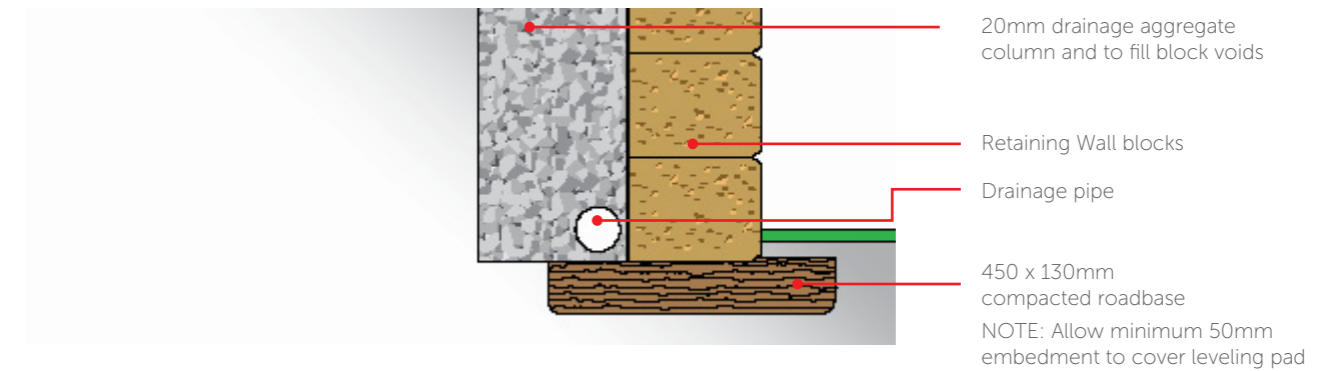

The Torpedo™ Base Block is best suited to DIY projects as it is the quickest and easiest way to create a level foundation. Compacted road base is most often used for standard gravity retaining walls and a concrete foundation would usually be used where soil conditions are poor or when exceeding the maximum unreinforced wall heights with an engineered design.

On the next page you'll find some typical cross sections for the three footing options.

PLANNING GUIDE TO FIRE PITS

Australia is blessed with a comfortable year-round climate that we're lucky to enjoy. While that is true, staying warm and cosy during cold winter nights is often only possible when we are confined indoors, rugged up with multiple layers and electric heaters on high. At least that was the case before fire pits became fashionable, affordable and practical for installation for your backyard!

Adbri Masonry Brand Ambassador and DIY Landscaping Expert Jason Hodges has long been a fan of fire pits, designing them in many of his feature works including his award-winning garden at the Melbourne International Flower and Garden Show.

"Fire pits are nature's TV, they stimulate all of our senses, provide families with a central gathering place that will become a feature of the yard and a place where countless memories are made" explains Jason.

There are many benefits to creating a feature fire pit in your garden but if you're like most homeowners, you'll be most attracted to the big-ticket benefits!

BENEFITS OF FAMILY FRIENDLY FIRE PITS

- ✓ Extend your living area
- ✓ Keep children and pets away from flames for peace of mind
- ✓ Becomes the immediate focal point of your yard (creates something from nothing)
- ✓ Creates an incredible atmosphere at your house
- ✓ Practical, low cost and easy to install
- ✓ Provides warmth and light allowing you to entertain year round, day and night!

“ Fire pits are nature’s TV, they stimulate all of our senses, provide families with a central gathering place that will become a feature of the yard and a place where countless memories are made.”

ADBRI PRODUCTS FOR FIRE PITS

MINIWALL®

VERSAWALL®

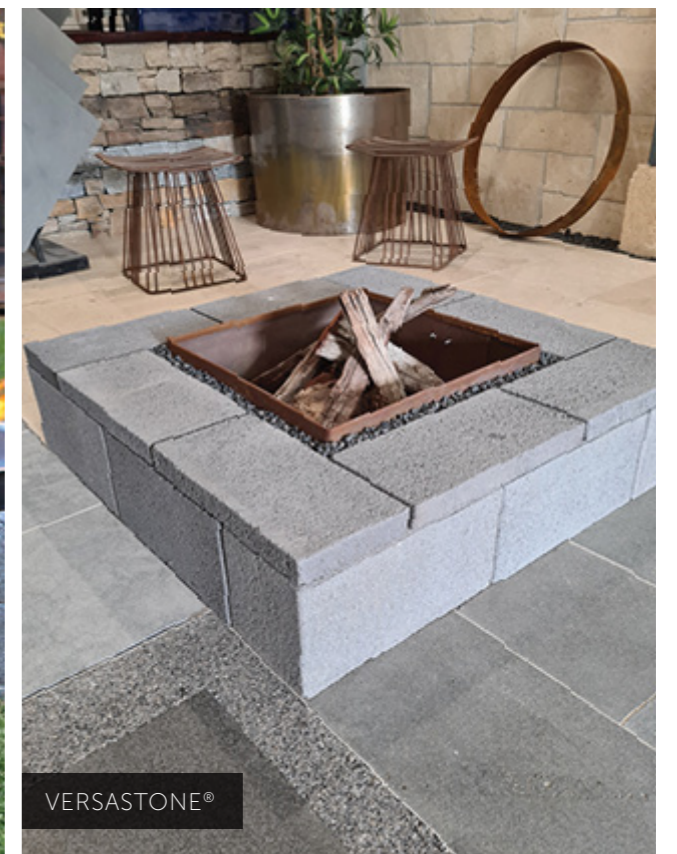

JASON'S TOP 5 FOR FIRE PITS!

1. Safety first – install properly, always supervise and have a bucket of water / sand close by.
2. Extend your homes living areas. An outdoor fire pit immediately creates a new hub for your home.
3. Choose a pit enclosed by garden blocks if you've got pets or young kids, they're extra safe.
4. Location, Location, Location – this is one of the key considerations when choosing.
5. If you're on a tight budget, try using garden wall blocks for your fire pit because they can double as informal seating, saving you money on extra furniture!

 Hudson Stone	878mm	618mm	14
 Eziwall	14300mm	1020mm	14
 Eziwall Lite	878mm	618mm	14

PLANNING GUIDE TO VEGGIE GARDENS

Now more than ever, Australian's are spending more time at home, enjoying time with family and friends in the comfort, privacy and safety of their homes.

"The extra time people have been spending at home has led to many discussions around the dinner table of how the home and garden could be improved" explains landscaping expert Jason Hodges. "Now that we are looking at these areas more, a whole DIY backyard renovation boom has started." continued Jason.

BENEFITS OF BUILDING A VEGGIE GARDEN AT HOME

- ✓ Great hobby for the family, great activity for young kids
- ✓ Save money (and trips) to the ever crowded grocery stores
- ✓ Eat what you grow – from paddock to plate in your own backyard
- ✓ Grow healthy, fresh produce to use in your cooking

“ Growing your own fruit, vegetables and herbs is a great way of kick starting your love affair with the outdoor room while providing your family with quality produce direct from the garden to the kitchen table.”

ADBRI PRODUCTS FOR VEGGIE GARDEN

FOR SQUARES & RECTANGLES: VERSAWALL® BLOCKS

A recommendation for DIY projects for square or rectangular veggie gardens would be to build with Adbri's Versawall® retaining wall blocks.

The reason these blocks are perfect for veggie gardens is because they are made for DIY with speciality corner units. This makes returns and corners very easy to work with. These blocks are slightly larger and use a special 'capping' unit to finish the walls.

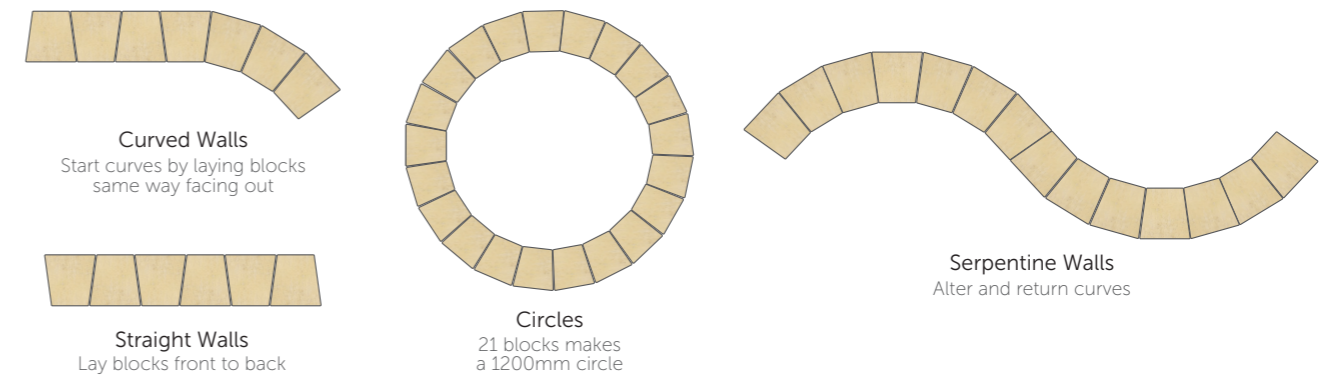

This not only provides a great finish, it also doubles as casual seating in your garden for informal entertaining!

FOR CURVES AND CIRCLES: MINIWALL® BLOCKS

Curved veggie gardens are very popular as they allow for custom designs to perfectly suit the size, shape and space available in your yard.

The best concrete block for curved veggie gardens is the Miniwall® block. These blocks feature great benefits, they are; light so they are easy to handle and install, and they are textured on both sides which allows you to create curves and straight walls as well as circles! Tree circles are fantastic if you are looking to plant a fruit tree or smaller herb garden.

OPTIONS FOR LAYING MINIWALL® BLOCKS

PRINCIPLES OF LANDSCAPE DESIGN

PROPORTION

- The way things relate to each other with respect to size (big, medium, little)
- This is very important in residential design as we want elements that are in proportion to each other.
- Too much variance in size creates confusion as we can't relate one element to the next.

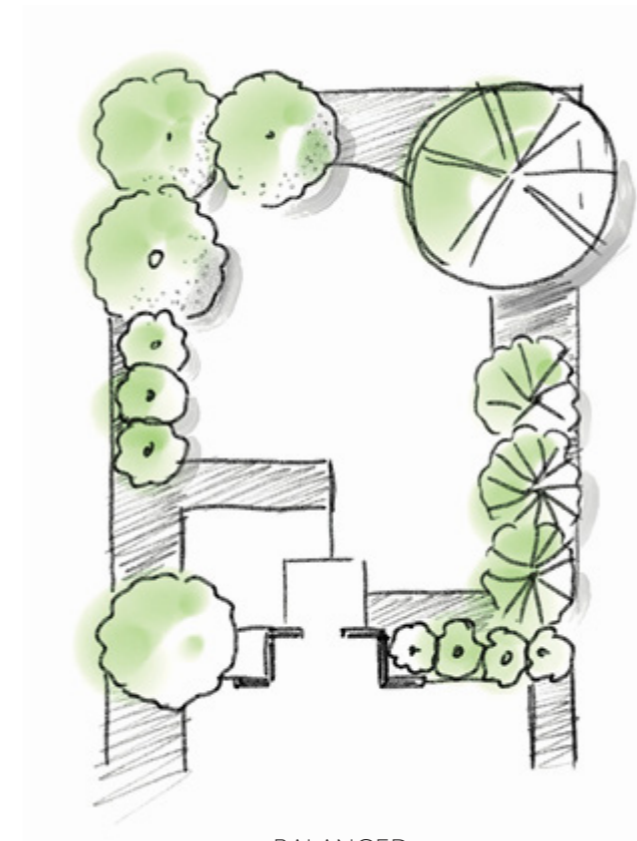

DISPROPORTIONATE

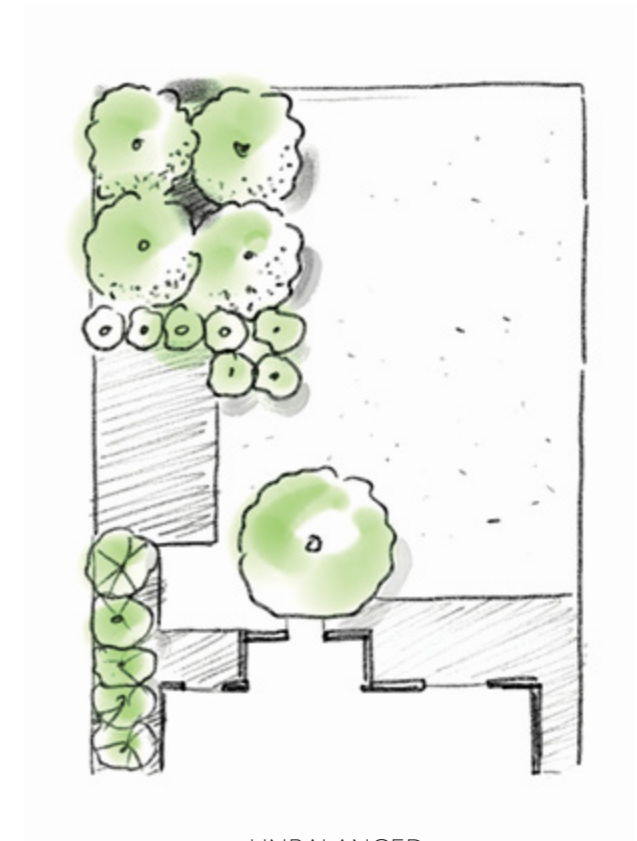

PROPORTIONATE

BALANCE

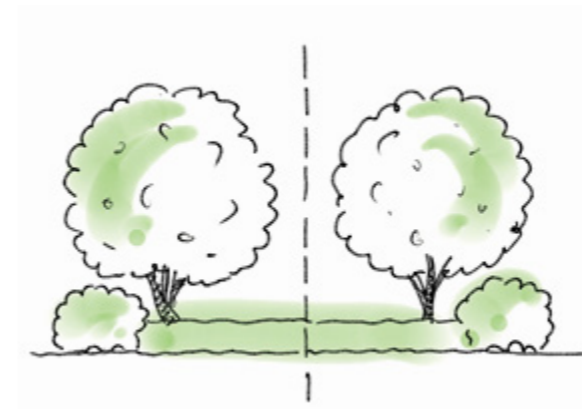

- A state of equilibrium, equality in weight, amount, value or importance. Two types symmetrical and unsymmetrical.
- Backyard composition – hard Vs soft landscaping

BALANCED

UNBALANCED

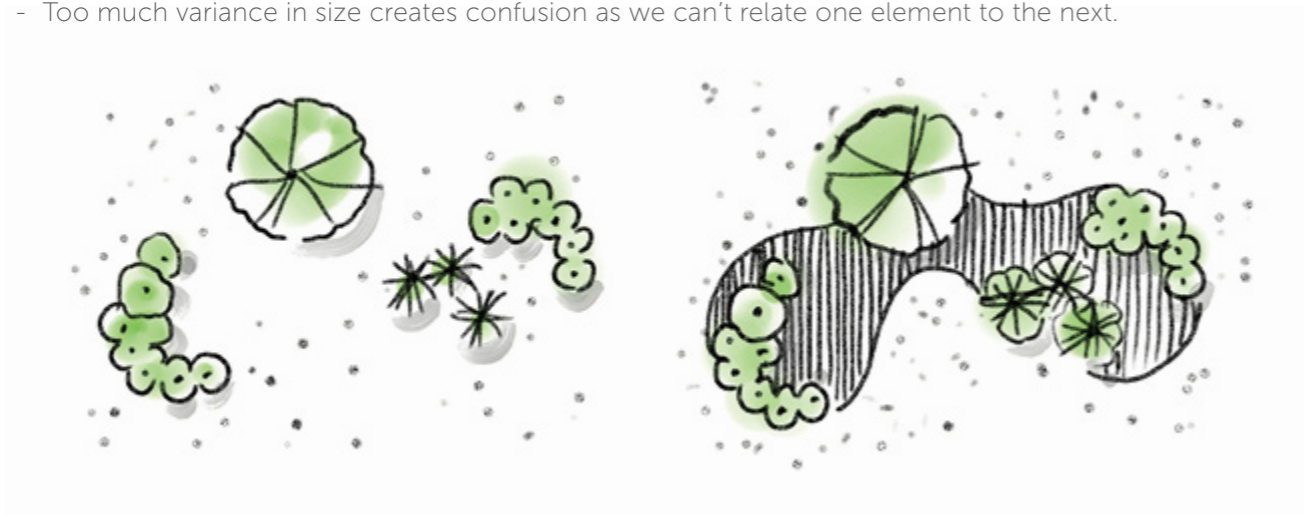

SYMMETRICAL

ASYMMETRICAL

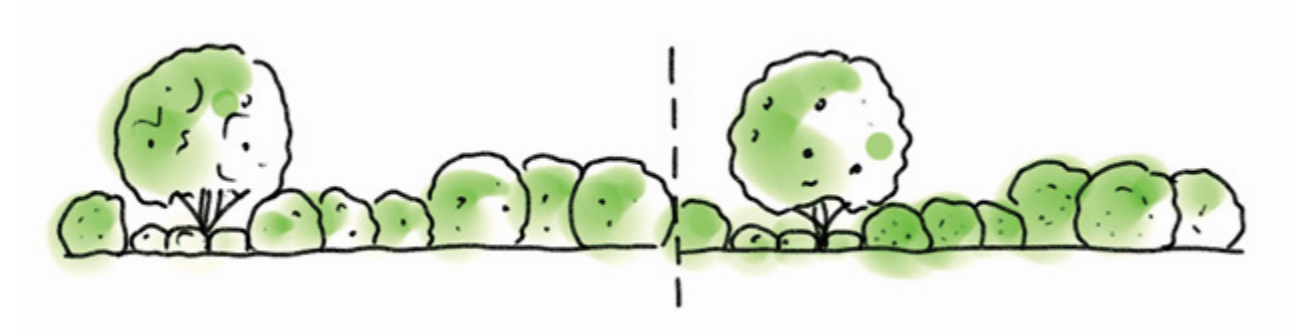

UNITY

- The way things relate to each other with respect to size (big, medium, little)
- This is very important in residential design as we want elements that are in proportion to each other.
- Too much variance in size creates confusion as we can't relate one element to the next.

INTERCONNECTION

When interconnection is utilized the eye can move smoothly from one element to another.

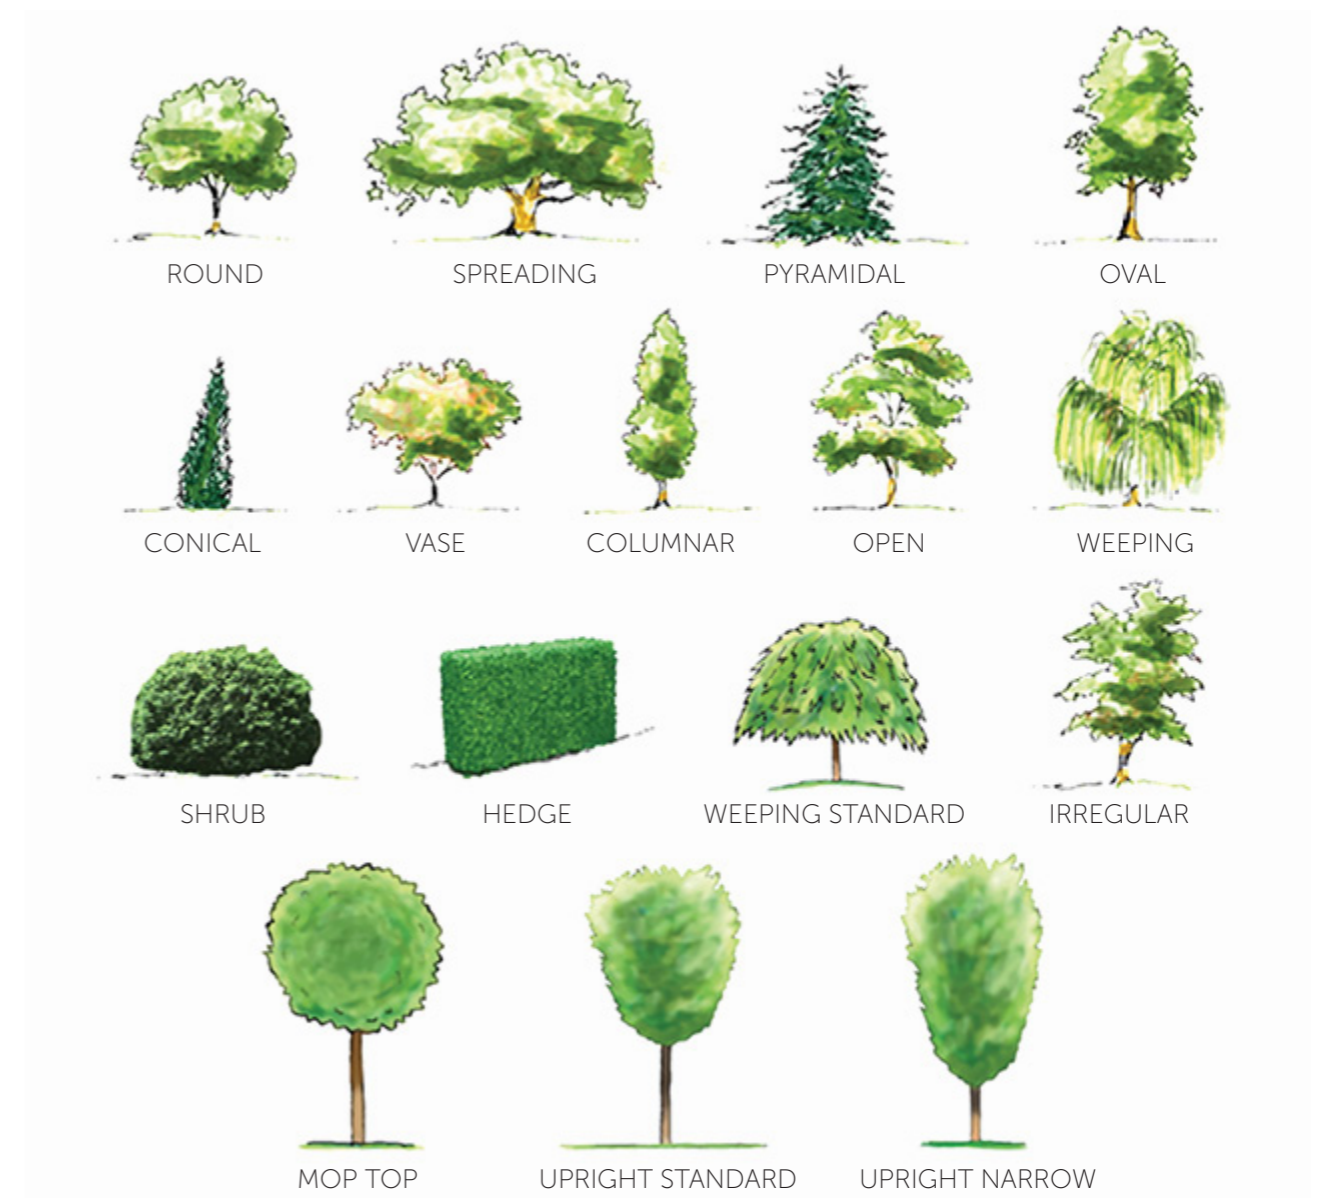

REPETITION

Selected plant material should be repeated throughout the landscape.

UNITY OF THREE

Whenever three elements of the same kind are grouped together you get a strong sense of unity.

FORM CHECK

- Form (shape or outline of a three dimensional shape) can be determined by lines, direction and arrangements.
- Very powerful element - People can often perceive a form when only a portion of it is visible. Familiarity, and the suggestion of form is enough, it encourages the eye to fill in the blanks.
- The primary consideration is what forms work well together.

TEXTURE

- Most important for home landscaping projects.
- Provides variety, interest, contrast.
- Texture is significant when considering scale, particularly in smaller backyard areas.
- Texture is found everywhere, soft and hard landscape. Can be both seen and felt.
- Rough or smooth, coarse or fine – texture creates a tactile experience.
- Tip: With greenery, fine texture exaggerates distance and gives the feeling of a larger, more open space. Rough texture minimizes distance

FINISHING TOUCHES

LIGHTING

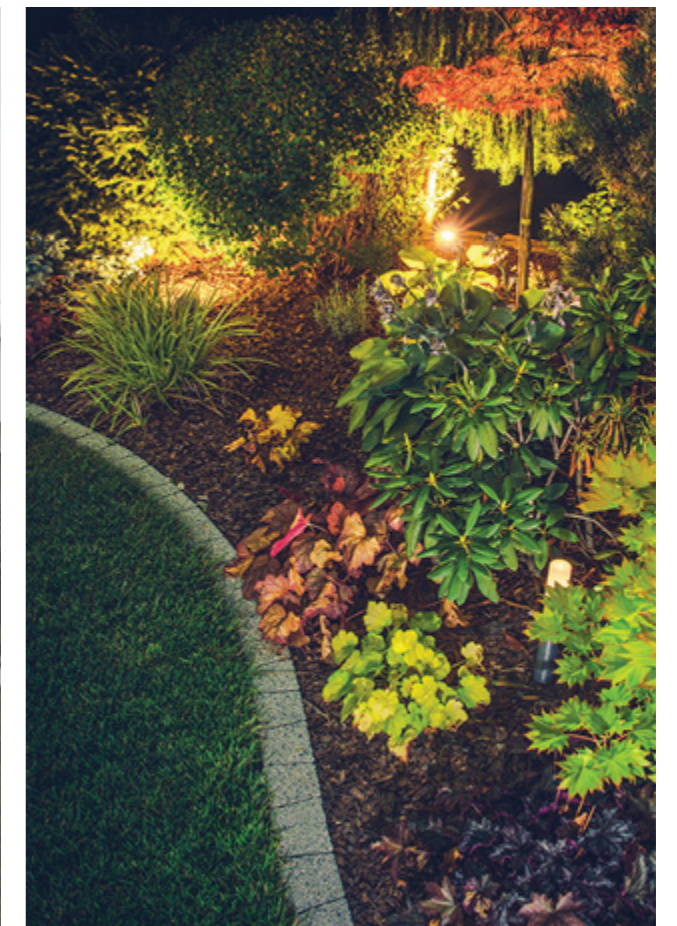

Australians love the outdoors, especially in spring and summertime as the days get longer we enjoy our outdoor spaces more and entertain more. To really add those finishing touches to your outdoor space consider your outdoor lighting design, focus on the primary objectives: illuminating the garden space to highlight garden features, lighting up the pathways for safe navigation, using accent lights to showcase the hardscape, or exterior house lights to show off the frontage of your home or creating a stunning smartly-lit outdoor entertaining area.

Go bold for a dramatic effect or subtle for a gentle, intimate ambience. There are many options to consider, low voltage, energy-efficient LED bulb and LED strip lighting that are waterproof and perfect for your outdoor living space. A popular growing trend are solar garden lights that provide a convenient DIY solution.

When planning light placement, it's important to avoid having lights at eye level that can make it uncomfortable for you or your guests.

Useful areas to add in some light:

- Front Entry
- Driveways
- Pathways
- Large Feature Tree/s
- Around Pool Areas
- Seating Areas
- Entertaining areas
- Fire Pit areas
- Hardscape areas
- Open Courtyards
- Garden Areas
- Step Lighting

READY TO START?

PLAN YOUR PROJECT

- Measure up your garden space and draw the perimeter of your property and external walls of the house that borders your garden area.
- Add existing elements such as fixed structures or trees.
- Draw your planned entertainment area and other areas to be paved or bricked, such as fences, paths and mowing strips.
- Add key features such as water features, arbours and outdoor furniture.
- Add any lawn areas and garden beds.
